

Microsoft Security Workshop

Design a secure plan for success

Strengthen Your Microsoft Cloud Security Posture

Alchemy Technology Group has designed a Microsoft Security Workshop to secure and optimize Microsoft 365 and Azure environments. This workshop is designed to help organizations plan their Microsoft cloud rollout, with security as a driver for success, rather than an afterthought.

Our professional consultants will work directly with your team to assess, design, and document a success plan for best practices and secure configurations so you can protect your data, your employees, and your business.

Assess, Design, and Document

Alchemy will work with your team to evaluate the current state and build a roadmap for success.

Workshop

Alchemy will deliver a tailored workshop, including the following:

Goals and Strategies

- Understand business goals
- Review identity strategies

Discovery

- Tenant overview and licensing overview
- Existing security configuration review
- Existing controls review

Controls

- Perimeter
- Visibility
- Control points

Workload Security

- Exchange
- SharePoint
- Azure
- Apps
- Teams
- OneDrive
- Defender for Endpoint, Identity, and Office

Project Documentation

Alchemy will present a document with the following findings:

- Current environment vs. target environment
- Licensing utilization and gaps
- Organizational goals and action items
- Findings related to security
- Recommendations and next steps
